

Allweld Marine & Industrial

"The Best in the Weld"

FACILITIES

Allweld owns its own premises in Ndabeni which is less than 10km away from the Cape Town City Centre and Cape Town Harbour; thereby offering quick turnaround times for all services.

Allweld Machine Shop complements our workshop and adds to our one stop shop offering to our clients. The Machine Shop equipment includes various centre lathes from 2 metres to 5 metres between centres with digital read-out, and a maximum swing of 2 metres; horizontal and vertical boring machines; milling machines; and associated calibrated measuring equipment.

The Allweld Marine facility in Cape Town includes a machine shop, valve shop, fabrication workshop and prep shop covering 1000m², all serviced by three overhead gantry cranes of 5T SWL capacity each and a 3T SWL forklift. The outside storage area covers almost 700 m². We have mobile containers with specialized equipment on key client sites all around Southern Africa.

The clean environment Valve Shop has a test bench capable of testing to 2980 Bar pressure on all types of valves and pumps. The vehicle fleet for on-site projects includes six 1T utility vehicles, two 14-seater buses, mobile generators and on-site offices/workshops.

Adjacent to the Allweld Marine premises is the Allweld Solutions Training Centre which was extended in late 2009 due to the increased demand for training. The Training Centre includes a 56-seater auditorium, customer entertainment area and a fully equipped welding school for training or coding of up to 40 welders in technical disciplines to accredited standards. The aim being to up-skill and train welders to Allweld's demanding standards in order to raise the overall standards within the local industry.
